CB23F35: Low-Code Application Development using Zoho Creator

Assignment 1: Patient Appointment Booking Form

Name: Balaambiga C A

Register No.: 240701068

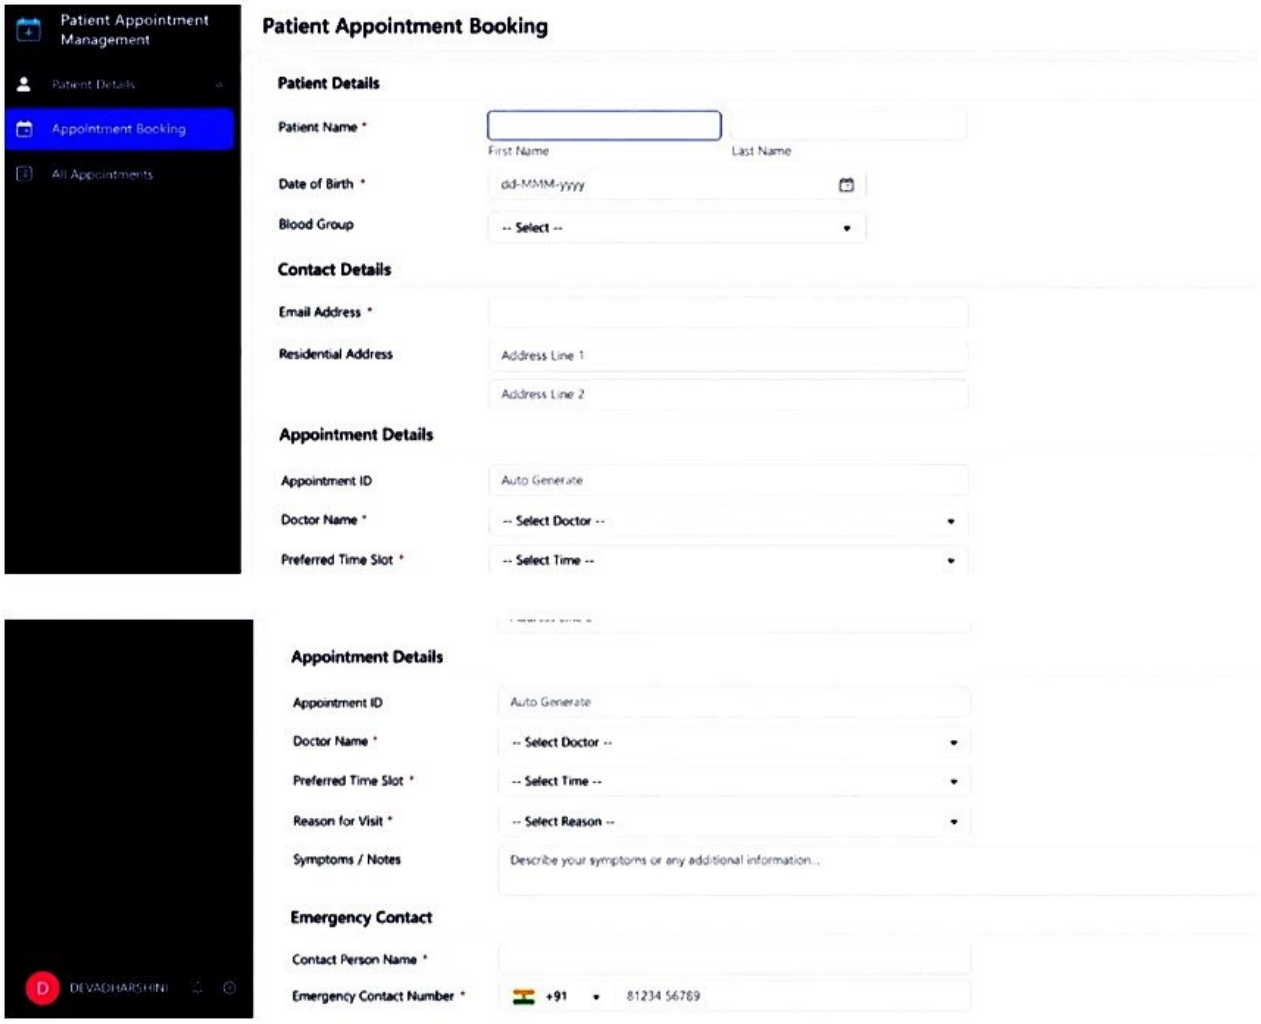

AIM

To design and develop a Patient Appointment Booking Form application using Zoho Creator to collect, store, organize, and manage patient details, contact information, medical details, preferred appointment schedules, and treatment consent efficiently.

PROCEDURE

1. Create a new application named "Patient Appointment & Scheduling Management" in Zoho Creator.
2. Create a form named "Appointment_Booking_Form" to collect the patient's personal, contact, medical, scheduling, and consent details.
3. Add the thirteen Basic Fields: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.
4. Arrange the fields into four sections: Patient Details, Contact Details, Medical Details, and Scheduling & Consent.
5. Configure the fields with suitable labels and options. For example, use Male/Female/Other for Gender and department choices for the Department drop-down.
6. Set the required validation rules: make Patient Name, Phone, Age, Gender, Department, Preferred Appointment Date, and Consent mandatory; validate email and phone formats; restrict Age to 0–120; and prevent selection of past appointment dates.
7. Preview and test the form to ensure that the fields, dropdowns, selections, and validation rules work correctly.
8. Create a report named "Appointment_Booking_Report" to display submitted appointment requests.
9. Submit sample patient records and verify that the records appear in the report. Configure an appointment confirmation email if required, then allow front-desk staff to filter records by department and preferred appointment date.

OUTPUT:

RESULT

Thus, the Patient Appointment Booking Form was designed and developed using Zoho Creator. The form organizes patient personal, contact, medical, appointment scheduling, and consent details using all thirteen Basic Field types. The Appointment_Booking_Report supports viewing and filtering submitted requests so that front-desk staff can review and coordinate appointment scheduling.
