# CB23F35: Low-Code Application Development using Zoho Creator

## Assignment – 2

Name: Balaambiga C A

Register No.:240701068

### AIM:

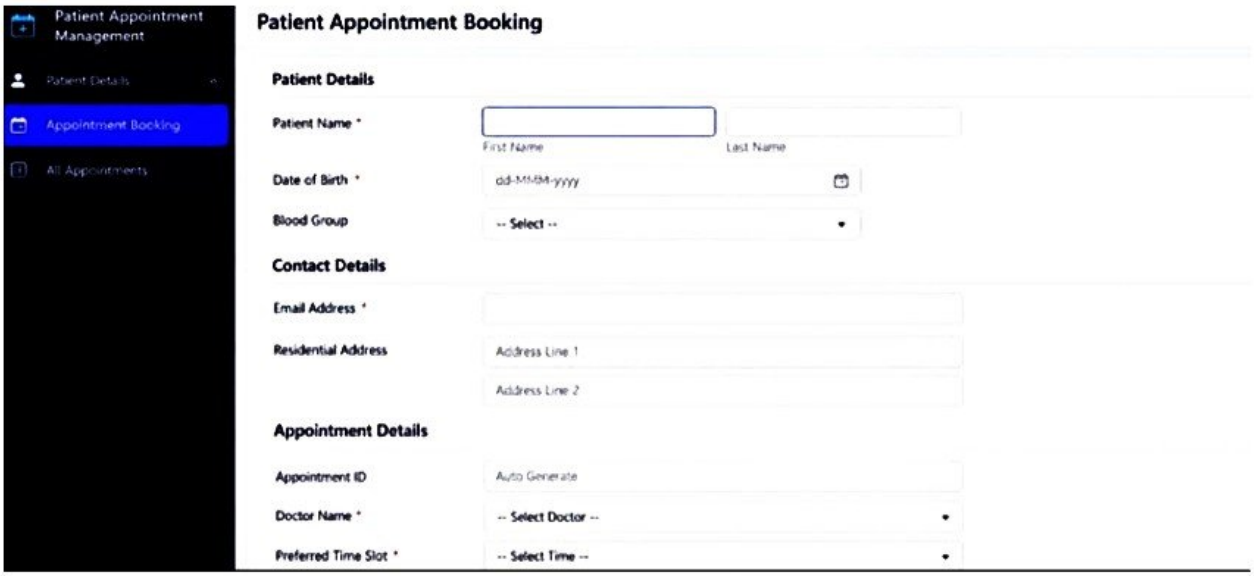

To extend the existing Patient Appointment Booking Form application in Zoho Creator by incorporating all seventeen Advanced Fields, enabling automated appointment identification, doctor availability verification, family-member registration, fee calculation, and medical file and media handling.

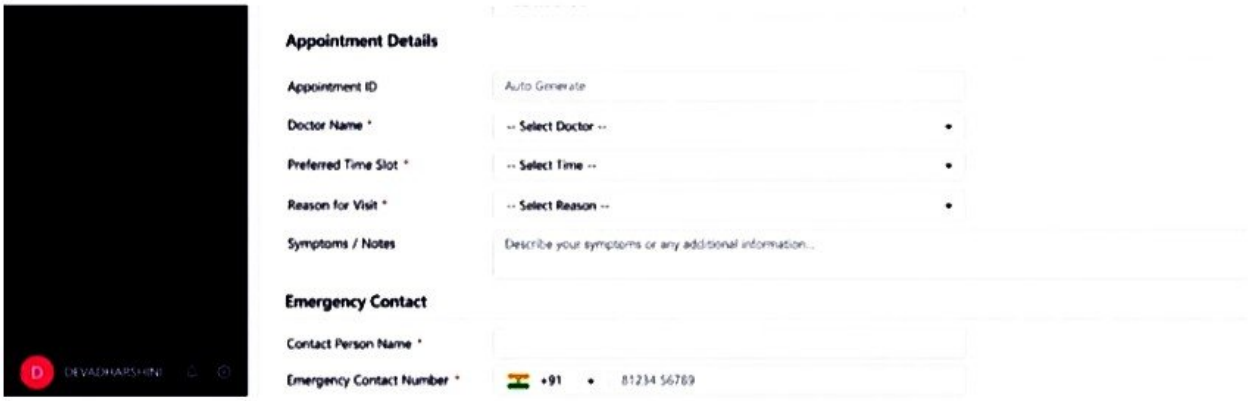

### PROCEDURE:

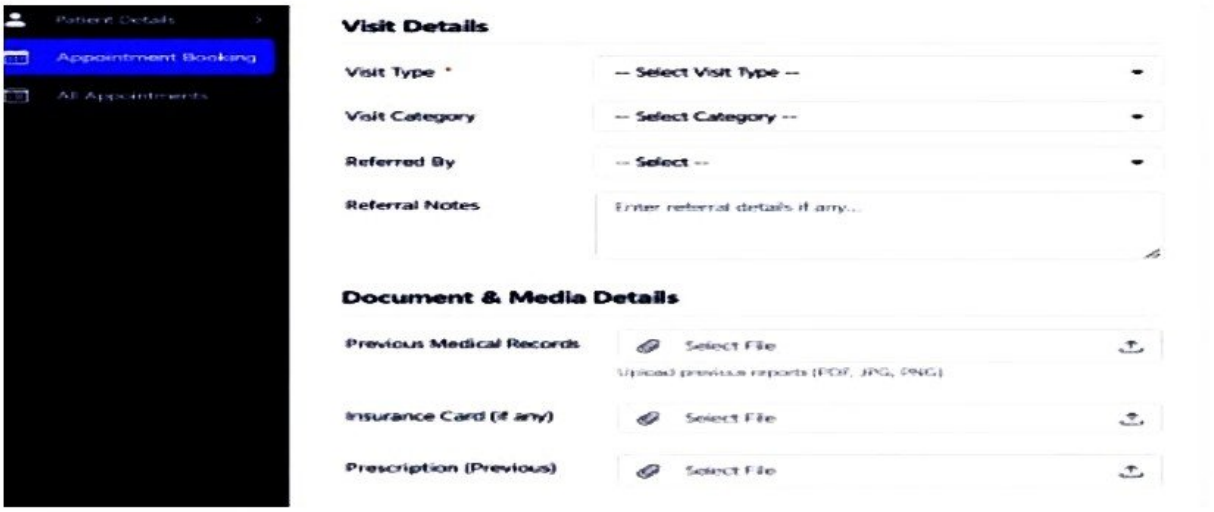

1. Open the existing "Patient Appointment & Scheduling Management" application in Zoho Creator and extend the "Appointment_Booking_Form" with the Advanced Fields.
2. Add the Decision Box field "Requires_Ambulance_Pickup" to record whether ambulance pickup is required.
3. Add the Rich Text field "Clinic_Guidelines_Display" to display clinic instructions and the URL field "Previous_Report_Portal_URL" to capture a link to an online medical report.
4. Add the Image field "Patient_Photo", File Upload field "Previous_Medical_Report_Upload", Audio field "Symptom_Voice_Note", and Video field "Symptom_Video" to capture the patient photo and supporting medical media.
5. Add the Percent field "Insurance_Coverage_Percent", Currency field "Consultation_Fee", and Decimal field "Body_Temperature_F" to record insurance coverage, consultation charges, and body temperature.
6. Add the Date-Time field "Appointment_Submitted_On" to record the submission date and time, and the SubForm "Accompanying_Family_Members" to enter details of accompanying family members in repeating rows.
7. Create a Doctors master form and configure the Lookup field "Doctor_Availability_Lookup" to retrieve the doctor's specialization and available time slots.
8. Add the Signature field "Patient_Digital_Signature" to capture consent for examination and treatment.
9. Configure the Auto Number field "Appointment_ID" with the prefix "CLN-APT-", the current year, and a six-digit sequence. Add the Formula field "Net_Payable_Fee" to calculate the fee after insurance coverage.
10. Add the QR/Barcode field "Appointment_QR_Code" to generate a scannable QR code using the Appointment ID.
11. Apply the validations specified in the assignment: allow 0–4 family-member rows; restrict report uploads to PDF/JPG/PNG up to 5 MB; restrict patient photos to JPG/PNG up to 2 MB; limit videos to 30 seconds and 50 MB; set insurance coverage between 0 and 100%; and allow only non-negative consultation fees in INR.

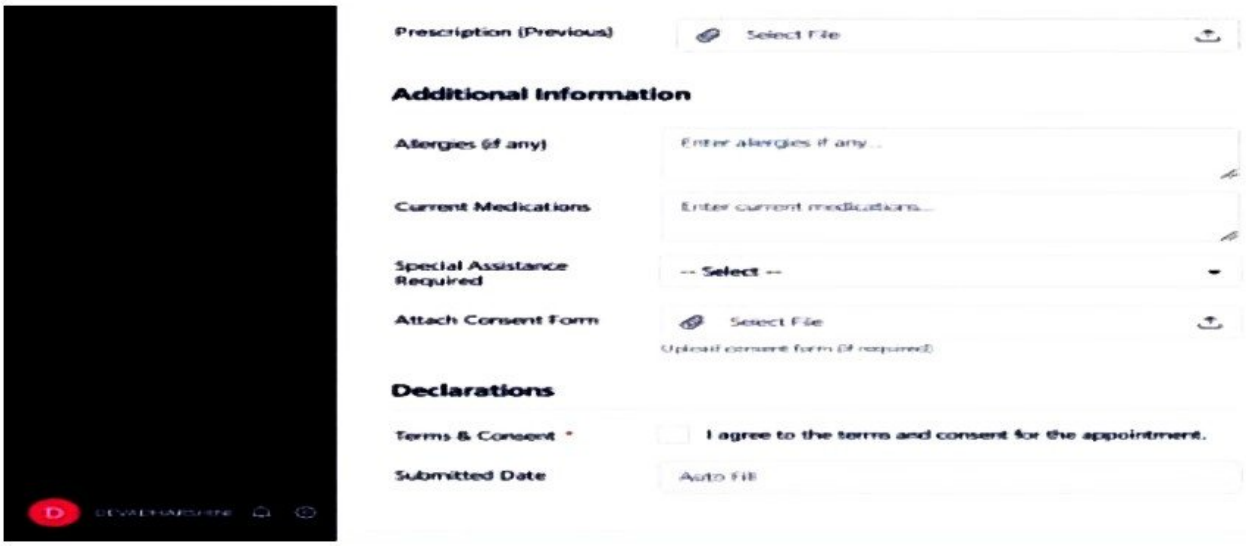

12. Make the Formula field read-only and ensure it recalculates when the consultation fee or insurance coverage changes. Make the Decision Box and Signature mandatory, and configure the QR code to generate after the Appointment ID is assigned.
13. Preview and test the extended form. Submit sample records and verify the generated Appointment ID, QR code, calculated payable fee, doctor lookup, and submitted records in "Appointment_Booking_Report".

**OUTPUT:**

**RESULT:**

Thus, the Patient Appointment Booking Form was extended in Zoho Creator using all seventeen Advanced Fields. The extended form supports doctor availability lookup, family-member registration, medical file and media uploads, consent capture, insurance-based payable-fee calculation, and automatic generation of an Appointment ID and QR code. The Appointment_Booking_Report enables the front desk to review appointment details, verify the payable amount, and use the QR code for faster check-in.
