CB23F35: Low-Code Application Development using Zoho Creator

Assignment – 3

Name: Balaambiga C A

Register No.: 240701068

AIM:

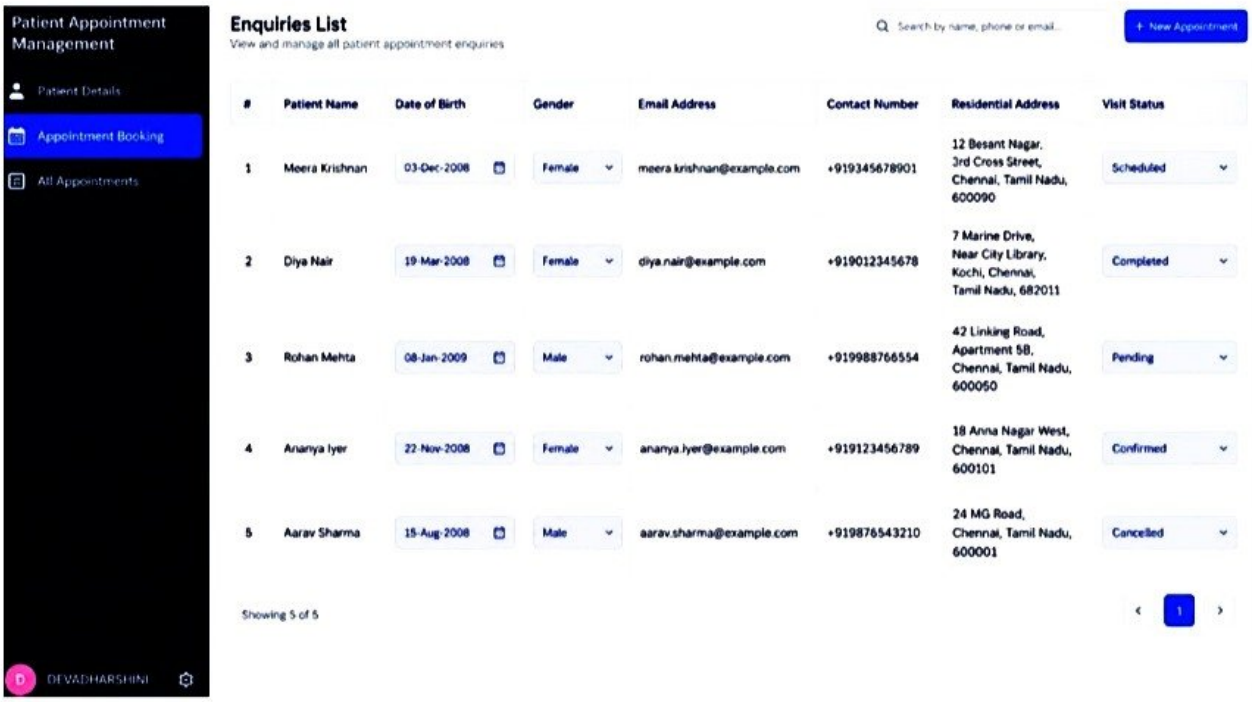

To design and build a complete suite of reports in Zoho Creator for the existing Patient Appointment Booking Form, demonstrating all nine report types: List View, Spreadsheet View, Kanban View, Calendar View, Map View, Timeline View, Pivot Table, Chart View, and Summary View. These reports help the front desk, doctors, clinic administrator, and management view and analyze appointment data according to their needs.

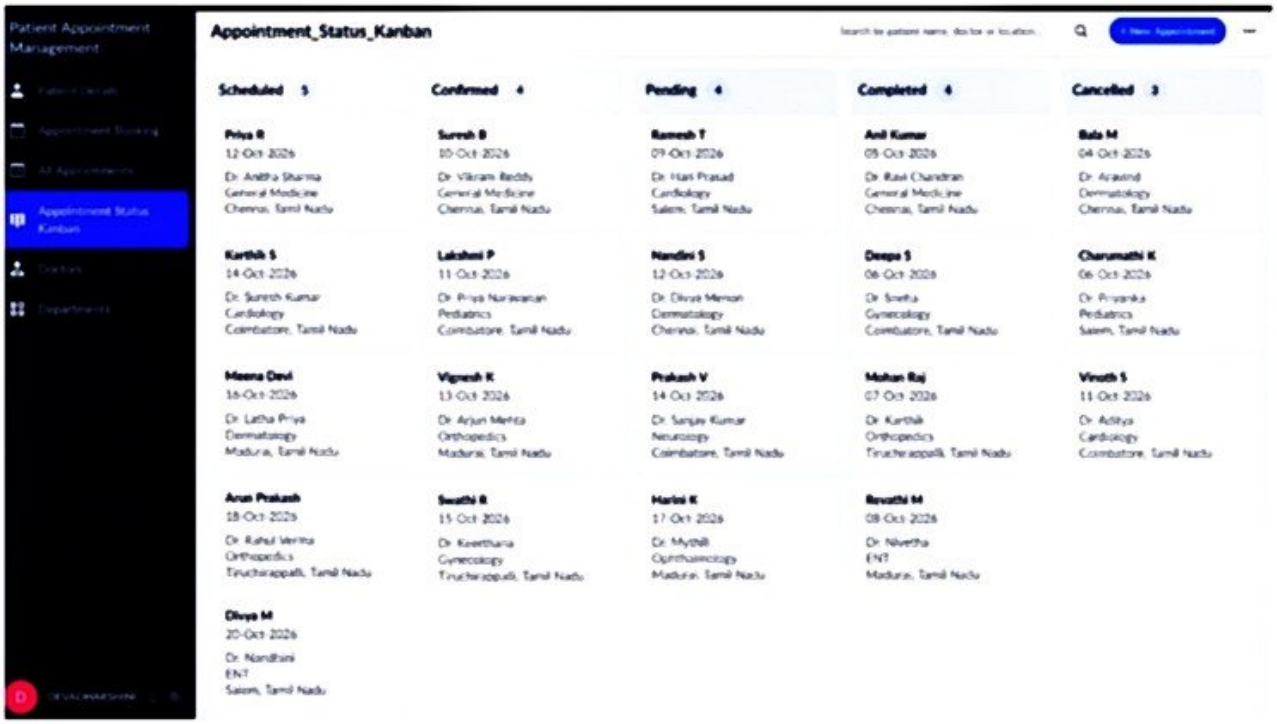

PROCEDURE:

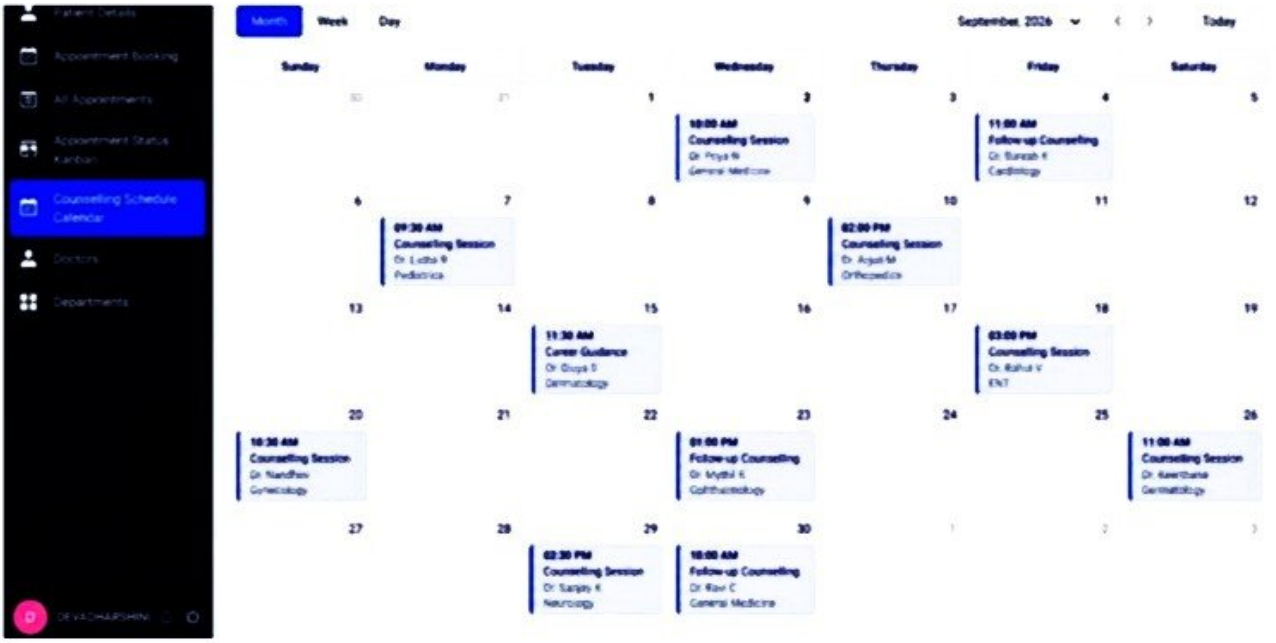

1. Open the existing "Patient Appointment & Scheduling Management" application in Zoho Creator and use "Appointment_Booking_Form" as the base form.
2. Create the List View report "All_Appointments_List" with patient name, department, gender, preferred appointment date, and appointment status. Sort records by preferred appointment date in ascending order.
3. Create the Spreadsheet View report "Appointments_Spreadsheet" to allow authorized front-desk staff to update check-in status, consultation status, and payment status in bulk.
4. Create the Kanban View report "Appointment_Status_Kanban", grouped by status such as Requested, Confirmed, Checked-In, Consulted, and Cancelled, so staff can track appointment progress using cards.
5. Create the Calendar View report "Appointment_Schedule_Calendar" based on the preferred appointment date to help doctors and front-desk staff view daily patient schedules.
6. Create the Map View report "Patient_Residential_Map" using the residential address field and enable geocoding to display patient locations for outreach health-camp planning.
7. Create the Timeline View report "Appointment_Activity_Timeline" based on the appointment submission date and time, grouped by week, to monitor patient-inflow trends.
8. Create the Pivot Table report "Department_By_Gender_Pivot" with Department as rows, Gender as columns, and appointment count as the values.
9. Create the Chart View report "Department_Load_Chart" using a bar chart, with Department on the X-axis and appointment count on the Y-axis.
10. Create the Summary View report "Doctor_Wise_Summary", grouped by doctor lookup, with a count of appointments for each doctor. Include appointments without an assigned doctor under "Unassigned".
11. Configure the report settings as specified: restrict spreadsheet editing to the front-desk role, enable automatic status updates when Kanban cards move, highlight current and next-day appointments in the calendar, refresh the timeline daily, display blank pivot cells as zero, and auto-refresh the chart when new appointments are submitted.

12. Submit sample appointment records and test each report, including interactions such as opening a calendar date or moving a Kanban card. Verify that the reports display the expected appointment information.

OUTPUT:

RESULT:

Thus, a complete Patient Appointment Reports Suite was designed in Zoho Creator using all nine report types. The reports provide different views of appointment information, support status updates and scheduling, show patient locations, and summarize department and doctor workloads. This helps front-desk staff, doctors, clinic administrators, and management monitor appointments and make informed operational and staffing decisions.
