CB23F35: Low-Code Application Development using Zoho Creator

Name: BALAAMBIGA C A

Register No.: 240701068

Ex. 6: Implementation of 10 Deluge Functions in Zoho Creator

AIM:

To implement and demonstrate ten basic Deluge functions in Zoho Creator for performing data manipulation, calculation, and automation tasks in the Patient Appointment Management application.

PROCEDURE:

1. Open the existing Patient Appointment Management application in Zoho Creator.
2. Create a function in the Appointment_Booking_Form to perform operations using Deluge built-in functions.
3. Write and execute Deluge statements to demonstrate 10 different functions such as input, info, if-else, for each, list, map, date, number, email, and zoho.creator functions.
4. Use sample values from the appointment form (e.g., patient name, department, appointment date, consultation fee) to test the functions.
5. Execute the function and verify the output in the form or as an info message.
6. Save the function and test with different sample appointments.

OUTPUT:
